TRAILER CAM AND BUSHING KIT APPLICATION GUIDE

Camshafts Used with All Trailer Axle Kits

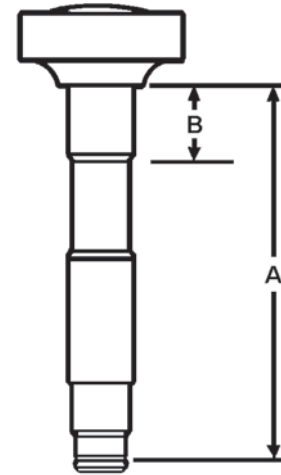

Except KIT 1760 or KIT 8289

Do not install any of the camshafts listed in Figure 1 if you are using KIT 1760 or KIT 8289. The bearing journals on these camshafts ("B") are too narrow to be used with the bushing retainer (A-3105-L-1078) in these kits.

CHOOSING THE CORRECT MERITOR AUTOMATIC SLACK ADJUSTER

FIRST: Make sure there is room for the ASA to operate!

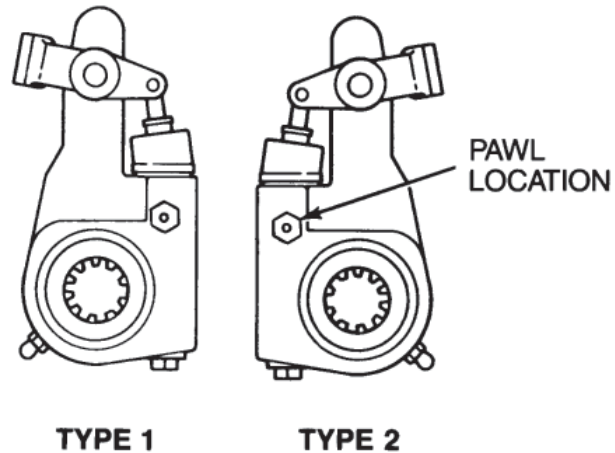

The **Unhanded** design slack is simply one in which the pawl assembly has been moved to the “edge” of the slack. The **Unhanded** design purpose is to eliminate having to stock pairs of slacks. In some cases, this pawl location won't be the best choice for clearance with other components in the axle area or for service accessibility to the ASA. When this occurs, use a Handed design.

The **Handed** design locates the pawl on the main body of the ASA. These ASA's are available as Type One and Type Two pawl mountings to fit each side of the axle and aid in accessibility in service and clearance with other axle components.

SPECIAL ASA DESIGNS FOR CLEARANCE CIRCUMSTANCES

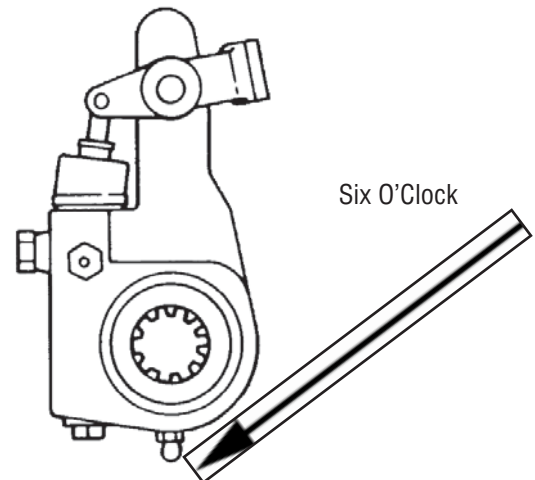

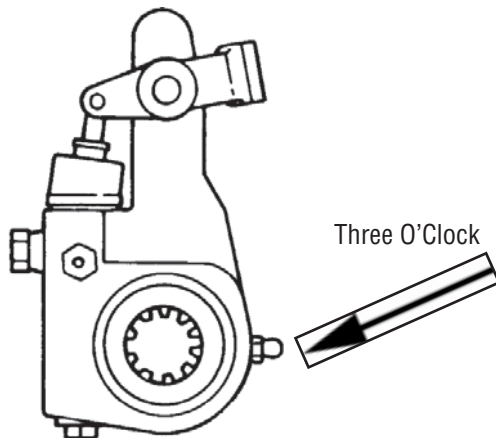

Machined corner ASAs have just that, a slightly machined off corner. This was done on certain applications where additional clearance was necessary. These machined corner numbers may substitute another slack of the same attributes without a machined corner.

MACHINED CORNER

8

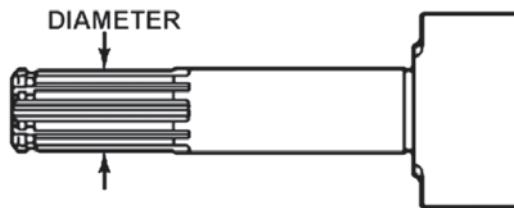

Relocated grease fittings are another attribute for some slack applications. This relocated grease fitting came about when the OEM application required the zerk to be at a different location other than the normal "4:30 position". 3 O'clock and 6 O'clock are the two other options available for some applications.

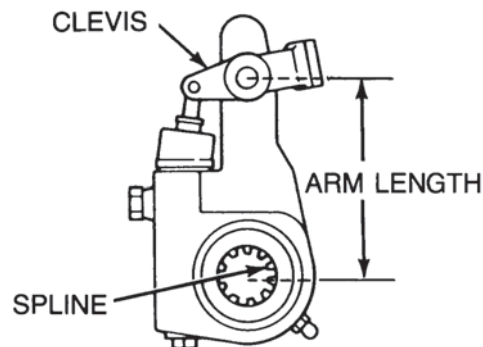

INFORMATION NEEDED TO SELECT THE RIGHT ASA

ONCE THE CLEARANCE AND HANDED ISSUES ARE DETERMINED, ASA SELECTION IS EASY! YOU JUST NEED THE FOLLOWING INFORMATION ABOUT THE VEHICLE APPLICATION:

1. SPLINE DIAMETER AND SPLINE COUNT OF THE CAMSHAFT

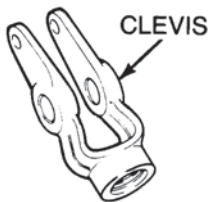

2. ARM LENGTH Distance from center of cam to the main clevis center hole.

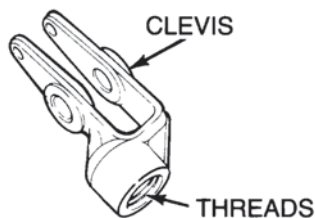

3. CLEVIS CONFIGURATION Clevises are either straight or offset. In some cases a helper spring will be needed for use with the clevis. This will occur with the smaller chamber types 9 and 12.

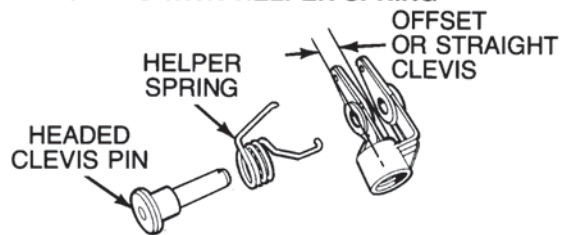

STRAIGHT CLEVIS

OFFSET CLEVIS

CLEVIS WITH HELPER SPRING

4. CLEVIS THREAD SIZE This will correspond to the air chamber push rod. Generally, chamber sizes 9, 12 and 16 will use a 1/2"-20 thread clevis, and chamber sizes 20, 24, 30 and 36 will take a 5/8"18 thread clevis. All aftermarket clevises are threaded. The "quick connect" clevis is for OEM production assembly use only.

5. THE AIR CHAMBER SIZE AND TYPE OF BRAKE The Meritor ASA adjustment is precision tuned by the piston in the actuator adjusting sleeve. There are two pistons of differing lengths depending upon the chamber application and will impact two things:

- A) When the actual brake lining **adjustment** is necessary
- B) **Adjusted Chamber Stroke** length visible to the operator

SELECTION TIPS

- For **drum brakes**, the most common drive axle chamber size is a type 30. Heavy application will use type 36. Front axle will typically use types 9 through 20.
- For **Meritor air disc brakes**, a 5-1/2" arm length, 1-1/2"-28 spline is standard. The air chambers will vary from type 20 to type 30. Type 24 and 30 are typical chamber sizes for rear air disc brakes.
- **Please Note: Both wheelends for each axle should have compatible ASA part numbers! DO NOT mix different Meritor part numbers on an axle because they may have different pistons and therefore different adjusted lining clearances.**

CHAMBER SIZE AND PISTON LENGTH CAN SUBSTANTIALLY IMPACT STROKE LENGTH

- All brakes have normal deflection, lining running clearance, and thermal expansion variances.
- Below is an example of a "typical" drum brake setup running at 600 degrees braking temperature and the corresponding maximum stroke increments for each activity taking place in the brake:

.80" stroke = Drum thermal expansion
.72" stroke = Normal lining running clearance
.27" stroke = Deflection of brake and drum

1.79" stroke = Measurable to inspectors

(If 2.0" is the established acceptable stroke, the vehicle is within the legal limits.)

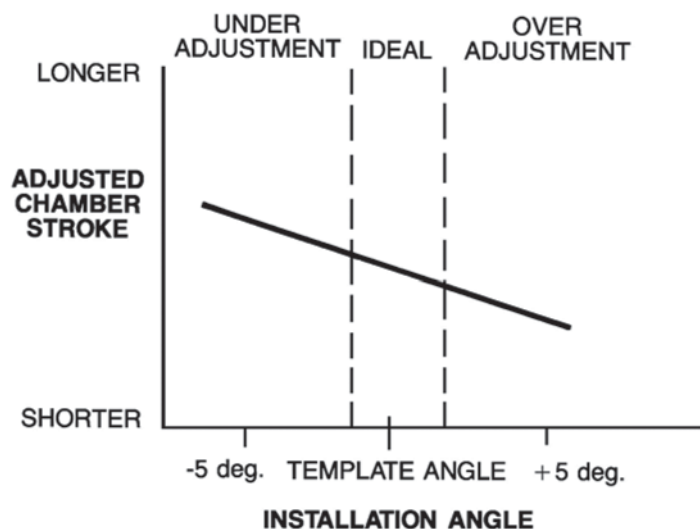

- If the proper ASA part number with the corresponding piston length for that chamber application is NOT used, the chamber push rod stroke and therefore the adjustment interval will be affected. To what degree depends upon the length variance between the correct piston for that chamber application and the wrong one.
- Each change in length can represent up to a .10 inch difference in push rod stroke. The .10 difference, **in addition** to the above normal effects on stroke, could put the vehicle out of service for an inspection violation.
- **When you are selecting an ASA, make sure that the chamber size corresponds to the ASA part number. Note: ASA selection for air disc brakes is slightly different than for drum brakes. Please pay attention to the ADB notations in the parts catalogs and wall charts.**

INSTALLATION TIPS

Once you've selected the right ASA type and part number, it is important to instruct the customer on installation of the ASA. There are installation templates in the box with the slack adjuster. Each installation template is designed to line up the clevis, push rod, and arm at a particular angle so that the most efficient adjustment of the brakes is obtained. Should the installation angle be off from the required template angle for that application, over adjustment or under adjustment will result - and therefore push rod lengths may be off from the acceptable lengths!

USE OF THE TEMPLATE WILL GIVE YOU THE IDEAL ADJUSTMENT

An example of the relationship is as follows:

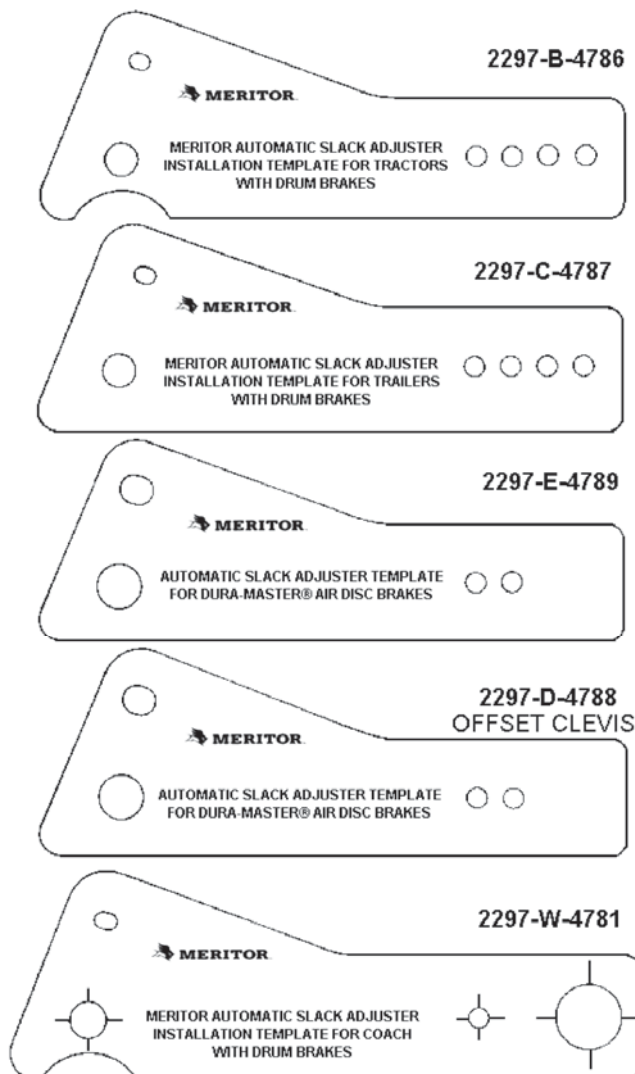

This is why the installation templates should be used and the correct part number/piston/chamber relationship needs to be maintained.

The templates are packaged with the ASA and are listed below with their corresponding applications:

TEMPLATE COLOR	NUMBER	APPLICATION
BROWN	2297-B-4786	TRACTORS WITH DRUM BRAKES
TAN/LIGHT BROWN	2297-C-4787	TRAILERS WITH DRUM BRAKES

YELLOW	2297-E-4789	AIR DISC BRAKES WITH STRAIGHT CLEVIS
WHITE	2297-W-4781	COACH APPLICATIONS WITH DRUM BRAKES

The Meritor ASA field maintenance manual #MM4 is available via Literature on Demand at meritor.com for specific installation information.

* The U.S. Department of Transportation, Federal Highway Administration has issued the above specifications for cam-type brakes. Meritor has petitioned the DOT to consider the disc brake recommended strokes. No ruling has yet been issued on the Meritor petition. Currently the DOT recommends the same strokes as cam brakes.

MERITOR AFTERMARKET PARTS WARRANTY

We warrant all new parts for one year from date of shipment to the buyer against defective material or workmanship (but not against damage caused by accident, abuse or improper installation, maintenance or repair) when such parts are used on vehicles the specifications of which have been approved by our Engineering Department.

As the exclusive remedy under this warranty, we will, at our option, repair or replace such parts free of charge, or take back the nonconforming parts and refund the monies paid by buyer for such parts, if found on examination by us to be nonconforming and if any necessary return charges are prepaid.

If it is necessary to return any parts under this warranty, buyer agrees not to make any deduction on account thereof from remittances on current accounts while claims are in the process of disposition. Any expense incurred without our consent for repairs or replacement will not be allowed.

THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES OR CONDITIONS, EXPRESS, IMPLIED OR STATUTORY, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR PARTICULAR PURPOSE. IN NO EVENT SHALL SELLER BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY NATURE.

Only genuine Meritor replacement parts are covered by this aftermarket parts warranty.

Vehicle models, brands and names depicted herein are the property of their respective owners, and are not in any way associated with Meritor, Inc., or its affiliates.
